Introduction to Public Health

HLTH 2020

An examination of the forces that have influenced current public health care delivery systems, health practices and trends.

Human Health and Disease

HLTH 2980

An overview of behavioral, biological and psycho-social factors associated with major human diseases and conditions, with an emphasis on best health practices.

Determinants of Health Behavior

HLTH 2400

Analysis of health behaviors based on psychological, social, cultural, and environmental factors. Introduces health behavior theories.

Epidemiology

HLTH 3800

Introduces epidemiological principles and methods used in the study of the origin, distribution, and control of disease. Health majors are given enrollment priority.

Global Health

HLTH 4700

Deepens students' knowledge of global health and how public health work is conducted internationally. Introduction to assessment of international health needs and designing, implementing, managing, and evaluating public health programs in international settings.

Infectious Diseases and Exposure

HLTH 3250

Introduction to communicable diseases commonly seen worldwide, and methods used to identify, treat, control and prevent these infections. Students examine how individuals with an infectious disease are a special population that requires a different level of care when being treated within a health system or within the community.

Research and Evaluation Strategies for Public Health

HLTH 4900

Discussion of research in public health. Focuses on analysis of reported research. Ethical, moral, and legal issues are discussed.

Women's Health Issues

HLTH 3100

Exploration of specific health needs of women, with emphasis on understanding and preventing problems of women's health.
